

CASTER FORK REPLACEMENT

Tools Needed:

- 6 mm hex wrench
- Small flathead screwdriver
- 15 mm open ended box wrench
- 3/4" socket

Step 2: Remove the caster wheel caps (circled in red) with a small flathead screwdriver. Use the 6 mm hex wrench to remove the center bolt and remove caster wheel from caster fork.

Step 4: Remove caster fork from frame.

Step 6: Reinstall the cap that sits on the caster fork.

Step 1: Use the small flathead screwdriver to pry the cap off that sits atop the caster fork.

Step 3: Place 15 mm wrench on to bolt head located between the caster fork. Next, place 3/4" socket onto nut located atop of caster fork.

Step 5: Install the new caster fork and reinstall caster wheel.

The End: Congratulations, you have successfully replaced the caster fork!
